

## Converting from Standard form to Slope-intercept form.

Show work on another piece of paper.

Convert from the given standard form of a linear equation to the slope-intercept form of a linear equation.

1.  $x + 5y = 5$

2.  $3x + 2y = 4$

3.  $2x + y = 4$

4.  $4x - 2y = 6$

5.  $8x - 4y = 16$

6.  $3x + 4y = 4$

7.  $9x - 4y = -16$

8.  $2x - 5y = 10$

9.  $3x + 5y = -25$

10.  $7x - y = 4$
